

AYUSHI JAIN

AI/ML Engineer (Deep Learning & NLP) | Python Developer | B.Tech CSE

8928772148 | ayushi1219jain@gmail.com | Navi Mumbai, Maharashtra | [GitHub](#) | [LinkedIn](#)

OBJECTIVE

Aspiring AI/ML Engineer with a strong foundation in Deep Learning, NLP, and machine learning pipelines using Scikit-learn, TensorFlow, Pandas, and NumPy. Hands-on experience designing a full-stack, explainable AI platform (EduGrant AI) with human-in-the-loop decision-making and fairness safeguards, along with working exposure to Prompt Engineering and foundational RAG/agent-AI concepts through applied project work. Seeking to contribute to NearLaw's AI-powered legal analytics platform through strong Python development, data pipeline engineering, and problem-solving skills.

TECHNICAL SKILLS

AI / ML & Deep Learning: Python, Scikit-learn, TensorFlow (Basics), Deep Learning, LSTM, Random Forest, NLP (NLTK, Text Preprocessing, Tokenization), Pandas, NumPy

Applied GenAI (Working Knowledge): Prompt Engineering, RAG (Conceptual, applied in EduGrant AI), Basic Agent-AI Workflows

Data Engineering: Data Pipelines, ETL, Data Ingestion, Data Transformation, Feature Engineering, Data Preprocessing, Matplotlib

Programming Languages: Python, Java, C++, C, SQL / MySQL, worked with supabase

Web & Frontend: HTML, CSS, JavaScript, React.js

Tools & Version Control: Git, GitHub, VS Code, Jupyter Notebook

INTERNSHIP EXPERIENCE

Machine Learning Intern | *OneStop AI*

2025

- Developed Python-based machine learning workflows for classification and regression problems using Scikit-learn.
- Built data ingestion and transformation pipelines: data cleaning, preprocessing, and feature engineering on real-world datasets.
- Used AI-powered coding assistants and LLM-assisted code generation to speed up experimentation and development.
- Applied NLP fundamentals and supervised/unsupervised learning techniques for predictive analytics and anomaly detection.
- Maintained project code on GitHub with version control, branching, and commit best practices.

Software Engineering Intern | *Timeline ERP, Belapur, Navi Mumbai*

2 Months

- Worked on ERP backend modules using Python scripting for data workflows, debugging, and performance optimization.
- Collaborated within a DevOps-aware environment, contributing to enterprise system architecture and documentation.

PROJECTS

EduGrant AI — Transparent Education Loan & Scholarship Eligibility Platform

Full-Stack AI Platform

Stack: React.js, Tailwind CSS, FastAPI, Scikit-learn/XGBoost, SHAP, Tesseract OCR, SQLite/PostgreSQL

- Designed and built a full-stack, production-style platform where AI only generates a recommendation (Likely Eligible / Needs Human Review / Likely Not Eligible) — final decisions remain human-in-the-loop, made by an admin.
- Trained a Random Forest/XGBoost model with SHAP-based explainability to surface transparent, plain-language reasons behind every recommendation.
- Implemented a Fairness Panel that explicitly excludes gender, religion, caste, and race from the model's feature set, and a document-verification pipeline (OCR text extraction, name cross-matching, stamp detection) using Tesseract.
- Built an "Ask AI" chatbot grounded in the applicant's own data and SHAP output — applied basic Prompt Engineering and RAG-style grounding to keep responses factual and avoid hallucinated numbers.
- Designed an Admin Panel with a low-confidence review queue, applicant analytics dashboard, and downloadable PDF reports.

CrowdSense AI — AI-Based Crowd Prediction & Risk Monitoring System

In Development

Stack: Python, React.js, FastAPI (planned), Supabase (planned), Regression ML (planned)

- Leading the design of a system to predict crowd count and classify risk (Low/Medium/High) for a given location and time, using historical crowd data, weather, and event/holiday information as inputs.
- Completed requirement analysis and SRS documentation, along with Use Case, Activity, and Data Flow Diagrams (Level 0–2) and database schema design.

- Currently building the React.js frontend (dashboard, crowd-risk display, map/heatmap visualization); backend (FastAPI + Supabase) and the ML prediction model are the next milestones.
- Planning Weather API and Maps API integration for real-time, location-based crowd risk alerts.

End-to-End ML Pipeline — House Price Prediction

Stack: Python, Scikit-learn, Random Forest, Pandas, NumPy

- Built a complete ML pipeline covering data ingestion, preprocessing, feature engineering, and model training on housing data.
- Achieved an 85% R^2 score on test data through hyperparameter tuning and feature selection.
- Organized the project into clean, modular components (src/, artifacts/, notebooks/) for readability and reproducibility.
- GitHub: github.com/Ayushi6002/mlProject

Rockfall Prediction System — Environmental ML

Stack: Python, Random Forest, LSTM, Matplotlib, Time-Series Data

- Designed ML models (Random Forest + LSTM) for time-series risk prediction using geological and environmental parameters.
- Built a real-time risk visualization dashboard using Matplotlib to communicate results to non-technical stakeholders.

CERTIFICATIONS

- GenAI Powered Data Analytics — TATA / Forage (Jul 2025)
- Data Analyst Certification — TATA / Forage (Jul 2025)
- Data Analyst Certification — One Roadmap (Jul 2025)
- Full Stack Developer — One Roadmap (Jul 2025)
- DSA Using Java — Infosys Springboard (Mar 2025)
- C++ Beginner to Advanced — GeeksforGeeks (Apr 2024)
- JavaScript Full Course — GeeksforGeeks (Sep 2025)
- 50 Days of LeetCode — Udemy (Aug 2025)
- Excel Skill Certification — One Roadmap (Jul 2025)
- Machine Learning – One Stop AI (2026)

EDUCATION

B.Tech — Computer Science & Engineering (Pursuing, 3rd Year)

Sep 2024 – Present

Vidyalankar Institute of Technology, Mumbai | University of Mumbai | NAAC-A+

- Latest Semester CGPA: 9.76 / 10.0
- Class XII (HSC) — New Bombay City School, CBSE — 76.5%
- Class X (SSC) — Podar International School, CBSE — 96.8%

ACHIEVEMENTS & ACTIVITIES

- Consistent Academic Excellence: Overall CGPA 9.71/10.0, Latest Semester CGPA 9.76/10.0; 96.8% in Class X (SSC).
- Core Member, Technical Council – VIT: Organized coding competitions and technical workshops; mentored junior students.
- Smart India Hackathon (SIH) Participant: Contributed to solution design, Python scripting, and rapid problem-solving under time pressure.
